

## Who is SanDiego350.org? (SD350)

SanDiego350.org is an all-volunteer organization of diverse San Diegans concerned about climate change and its very real effects on our lively-hoods, well-being, and the future for our children. We work to increase awareness of climate change and advocate for reducing greenhouse gas emissions.

*SD350 members join thousands for Bill McKibben's "Do the Math" Tour, LA 11/11/12*

### What do we work on?

- **Education & Outreach:** We organize workshops, talks, and other events to reach out to different communities, such as students or faith groups. We table at festivals and fairs, and hold "Climate Chats".
- **Public Policy:** We meet with elected officials, testify at public meetings and submit comments on climate-related local and regional policies, including climate action plans, transportation plans, and solar legislation.
- **Divestment from Fossil Fuels:** We are working on a national 350.org effort to encourage college endowment, pension and other investment funds to divest from fossil fuel companies.
- **Fracking:** We are working to educate San Diegans and elected officials about the threats of fracking including drinking water quality and quantity, earthquakes, and the need to leave most fossil fuels in the ground.
- **Demonstrations:** We organize San Diego's largest climate rallies, such as the People's Climate March, which had 1,500 participants, in Sept 2014.

### Monthly Membership Meetings

**We meet on the third Tuesday of each month, 6:45-8:15 PM.**

*Locations vary around the county – check  
[www.SanDiego350.org](http://www.SanDiego350.org) for details on upcoming meetings.*

To volunteer or join our email list contact [volunteer@sandiego350.org](mailto:volunteer@sandiego350.org)

# Climate Change is real.

It's happening now. There are solutions. We need you to help us make them happen.

## What can San Diego expect from climate change?

**By 2050, if current trends continue, San Diego will experience.....**

- More frequent & intense wildfires
- Coastal flooding and loss of beaches (sea level 12-18" higher)
- Severe water shortages
- Loss of unique animal & plant species
- Increased public health risks

*"Global warming isn't a prediction. It is happening." "...we can't wait any longer to avoid the worst and be judged immoral by coming generations."*

– NASA's James Hansen, "Game Over for the Climate", New York Times, May 9, 2012.

## What can we do?

Together, we can advocate for making public transportation, biking, and walking more convenient and cost effective; support higher vehicle mileage standards; promote energy efficiency, rooftop solar, energy and water conservation, and eating lower on the food chain; and ensure that California's climate change targets are met.

We are a proud affiliate of 350.org, the international group responsible for seeding thousands of climate actions around the world, the campaign to block construction of the Keystone XL Tar Sands Pipeline, and demanding that colleges divest from fossil fuels. Their work inspires us.
